Technology Services

Cyber Health Check and Vendor Risk Management (VRM) is a remotely delivered scan of a client's perimeter network devices and a compilation of findings in an executive summary report.

Client Benefit:

☐ Gives a client an independent, objective review of an organization's data security and privacy practices

☐ Scores are provided for each key data security area to provide a baseline measurement

☐ VRM enables a company to require their vendors complete a self-assessment of data security/privacy practices
